PROFILE

Backend Software Engineer with production experience building scalable RESTful APIs in Go, working in a backend team serving a high-traffic platform with 840K+ registered users and a 190+ GB MySQL database. Experienced in hexagonal architecture, Redis caching, database performance diagnostics, and production observability with Grafana and Sentry. Comfortable owning features end-to-end, from design through deployment and monitoring.

SKILLS

Go | MySQL | Redis | Hexagonal Architecture | REST APIs | HTML5 | CSS3 | JavaScript | React | Bootstrap | Git | OOP | Linux | Data Structures & Algorithms | Unit Testing | Grafana | Sentry | CI/CD | AI-Assisted Development (Cursor, Copilot, Cody, Claude) | Microsoft Office | Figma | Adobe XD | Adobe Photoshop | Confluence | Jira

EXPERIENCE

Software Engineer — [Pickleball.com](#)

02/2025 – 09/2026

Tuzla, BiH

- **Backend Development & Architecture:** Designing and implementing scalable RESTful APIs and core business logic in Go, following hexagonal (ports & adapters) architecture to keep domain logic cleanly separated from infrastructure concerns, for a high-traffic Pickleball platform serving 840K+ registered users across 7,400+ organizations and 22,000+ tournaments.
- **Caching & Performance:** Introduced Redis caching for frequently accessed, high-read endpoints to reduce database load and cut response latency, working with cache invalidation strategies and TTL-based expiration to keep cached data consistent with the underlying MySQL database.
- **Performance Optimization:** Diagnosed and resolved multiple production CPU spikes on a 190+ GB MySQL database by analyzing active database processes and query execution — including adding a missing index on a slow query and optimizing a scheduled job that computed statistics across a large volume of matches and tournaments.
- **Quality Assurance & Testing:** Ensuring system reliability by writing unit tests and performing rigorous manual testing across Development, Staging, and Production environments, and monitoring deployments post-merge to catch issues early and maintain zero-downtime releases.
- **Agile Methodology & Collaboration:** Working within a backend engineering team (alongside frontend engineers and a PM), actively participating in Agile/Scrum workflows including daily stand-ups and sprint planning, and collaborating with clients, project managers, and frontend teams to translate business needs into technical solutions.
- **Data Engineering:** Developing scripts for analyzing, cleaning, and migrating large datasets from external sources into the internal relational architecture.
- **System Monitoring:** Utilizing Grafana and Sentry to monitor system health, track errors, identify bottlenecks, and ensure high availability of the server-side infrastructure.
- **AI-Assisted Development:** Leveraging AI coding assistants (Cursor, Copilot, Cody, Claude) to accelerate implementation, with all generated code going through careful review and testing before merging.
- **Documentation:** Maintaining comprehensive technical documentation for APIs and system architecture to facilitate team onboarding and long-term maintainability.

Software Engineer Intern — [Cape Ann Enterprises](#)

06/2022 – 09/2022

Tuzla, BiH

- Produced clean, efficient code with supervision from a mentor using Angular 10, followed the Agile process, planned sprints and groomed user stories, and designed mockups using Figma.

EDUCATION

Bachelor in Information Technology — [IPI Akademija](#) Tuzla

10/2019 – 10/2022

Tuzla, BiH

Studying Information Technologies with a focus on:

- Data Structures and Algorithms
- Procedural and object-oriented programming
- Operating systems and databases
- Web development and web design

Computer Technician — [Elektrotehnička škola](#) Tuzla

09/2015 – 06/2019

Tuzla, BiH

LANGUAGES

English — Upper Intermediate

German — Beginner (A2)

LETTER OF RECOMMENDATION

September 2, 2026

To Whom It May Concern,

I am pleased to write this letter of recommendation for Admir Salkanović, who worked with us at Sigmabit as a Software Engineer on the pickleball.com ecosystem. Admir left the company as part of a company-wide reduction in workforce. His departure was in no way related to his performance, and I would gladly work with him again.

Admir was a member of the engineering team responsible for the clubs platform, which serves thousands of clubs and more than a million memberships across pickleballclubs.com and pickleball.com. He worked primarily in Go with MySQL, in a high-traffic production environment where reliability directly affects club operators and players every day.

What set Admir apart was his attitude toward quality. He did not consider a feature finished until it was covered by unit, integration and end-to-end tests, and the features he delivered were stable in production as a result. He took ownership of his work from design through release, communicated clearly with his teammates and consistently met his commitments.

Throughout his time with us, Admir demonstrated a strong work ethic and genuine dedication to the product and the team. He was dependable under pressure, open to feedback and always willing to help colleagues.

I recommend Admir without reservation for any software engineering position. He would be a valuable addition to any engineering team, and I am happy to answer any further questions about his work.

Sincerely,

Kenan H. Hasanović
CTO, Sigmabit
